

Exercise - Spelling Checker (30 minutes)

Take your code from the Spelling Checker exercise from the Dependency Inversion lecture

Typescript

1. Make a copy of your completed Spelling Checker program from the Dependency Inversion in-class exercise.
2. To your project, add dependencies on the Inversify and Reflect Metadata libraries using the following command
 - a. `npm install inversify reflect-metadata --save`
3. Modify the Spelling Checker program to use dependency injection using the Inversify library. Use the instructions in “The Basics” section of the Inversify home page to guide you (this is reference in the reading).
4. Submit your code on Canvas.
